SUMMARY

AI-focused Computer Science (AIML) student with strong understanding of AI tools, prompt engineering, and data handling. Hands-on experience building LLM-powered applications, RAG-based systems, and full-stack solutions. Demonstrated ability to formulate and refine prompts for optimal AI model performance. Proven problem-solving skills and a seeker mindset — continuously exploring innovative solutions to deliver measurable outcomes.

PROJECTS

SmartDocQ – AI Document QA System | *Personal Project*

2025

- Built a RAG-based AI system using Google Gemini LLM and FAISS vector database for high-accuracy contextual document Q&A — demonstrating strong understanding of AI tools and automation.
- Formulated and refined prompts for optimal AI model performance, improving answer relevance and response quality.
- Implemented semantic search and conversational memory for structured data handling and session continuity.
- Designed end-to-end pipeline showcasing data handling & structuring skills from document ingestion to intelligent response generation.

AI-Assisted CTF Mentor | *CyberFest 2026 Hackathon – CBIT*

2026

- Designed an LLM-powered guidance system using agent-based reasoning to provide structured hints instead of direct answers — applying strong problem-solving skills to improve learning outcomes.
- Built a progress tracking system to monitor user performance, generating data summaries to quantify engagement and outcomes.
- Implemented safety constraints to prevent AI misuse, demonstrating analytical rigor and proactive ownership.

Faculty Data Management System (FDMS) | *Personal Project*

2024

- Developed a full-stack MERN application with role-based authentication, demonstrating data handling & structuring for complex organizational datasets.
- Built REST APIs and dynamic dashboards to create comprehensive data summaries and visualizations — directly applicable to spreadsheet and reporting tool workflows.
- Designed scalable modular architecture, resolving technical challenges with analytical rigor and enabling easy feature expansion.

TECHNICAL SKILLS

AI Tools & Automation: LLM Applications, RAG Systems, Google Gemini, LangChain (basic), Prompt Engineering, NLP, Machine Learning, Deep Learning

Data Handling & Analysis: Data Structuring, FAISS / Vector Databases, Scikit-learn, MongoDB, SQL, REST APIs

Dashboarding & Reporting: Dynamic Dashboards (React.js), Data Visualization, Spreadsheets / Excel (working knowledge)

Web & Cloud: React.js, Node.js, Express.js, JavaScript, AWS EC2, Docker, Jenkins

Programming: Python, Java, C, C++ | Tools: Git, GitHub, VS Code

CERTIFICATIONS & RECOGNITION

- Agentic AI and AI Agents Workshop – BITS Pilani, Hyderabad.** Hands-on experience in AI agent design, prompt engineering, and LLM workflows.
- CyberFest 2026 Hackathon – Participation – CBIT.** Built an AI-assisted mentor system focused on secure AI usage and problem-solving.

EDUCATION

B.Tech – Computer Science (AIML) – Keshav Memorial Institute of Technology 2023–2027 CGPA: 7.55

Intermediate (MPC) – Resonance College 2021–2023 90.4%
